DEFINITIONS

Weighted Average Duration: The average duration of the underlying bonds in the portfolio or an index, as applicable, weighted by the relative size of each bond in that portfolio or index. Duration is a measure of the responsiveness of a bond's price to change in interest rates and the Weighted Average Duration of a portfolio or Index, as applicable, is a measure of the responsiveness of that portfolio or index to changes in interest rates. Bond prices generally move inversely to interest rates.

Weighted Average Yield to Maturity: The yield to maturity of a bond is stated as an interest rate and represents the present value of a bond's future coupon payment plus the difference between the bond's current market price and its par value receivable at maturity. The yield to maturity considers not only the coupon income, but any capital gain or loss that the investor will realize by holding the bond to maturity. It also considers the reinvestment of the coupons. The Weighted Average Yield to Maturity is the average yield to maturity of each of the underlying bonds in the portfolio or index (as applicable) weighted by the relative size of each bond in that portfolio or index.

¹Trades in U.S. Dollars. | ²Plus applicable sales tax. | ³As at July 31, 2026. | ⁴YTM = Yield to Maturity.

⁵On February 3, 2022, HSAV suspended new subscriptions after reaching approximately \$2 Billion in assets. Please refer to the [press release](#) for more information.

⁶On January 9, 2023, HSUV.U suspended new subscriptions after reaching approximately US\$775 Million in assets. Please refer to the [press release](#) for more information.

DISCLAIMERS

Effective July 1, 2026, Mirae Asset Global Investments (USA) LLC ("Mirae Asset USA") assumed the sub-advisory role for the Global X Active Global Dividend ETF ("HAZ") and the Global X Active Canadian Dividend ETF ("HAL"). The Global X Active U.S. Dividend ETF ("DIVY.U/DIVY") is also managed by the same share sub-advisor. Mirae Asset USA's investment process primarily utilizes a quantitative model, developed by WealthSpot LLC, an affiliate of the Manager, which incorporates machine learning techniques, including deep learning. The model generates systematic research outputs from multiple fundamental and alternative factors and incorporates financial data and other information sources relevant to the issuer, including rates of change of fundamental and alternative factors. Portfolio management and investment decisions remain the responsibility of Mirae Asset USA and are ultimately based on Mirae Asset USA's understanding of the company, its business and its outlook.

The use of quantitative models carries the risk of potential issues with design, coding, implementation and maintenance of the computer programs, data and/or other technology used in the quantitative models. These issues could negatively impact investment returns. Moreover, as with many developing technologies, AI presents risks and challenges that could affect its further development, adoption and use and, therefore, could affect the ETFs that use AI technology. AI algorithms may be flawed, and techniques such as machine learning and deep learning may prove ineffective. Data sets may be insufficient, of poor quality, or contain biased information. Any deficiencies or inaccuracies in the analyses that AI applications and/or quantitative models produce, or assist in producing, for an ETF, may result in a decrease in the value of the ETF's portfolio. Such risks should be viewed as an inherent element of investing in an investment strategy that relies upon a quantitative model that uses new technology, such as AI.

Commissions, management fees, and expenses all may be associated with an investment in products (the "Global X Funds") managed by Global X Investments Canada Inc. The Global X Funds are not guaranteed, their values change frequently and past performance may not be repeated. Certain Global X Funds may have exposure to leveraged investment techniques that magnify gains and losses which may result in greater volatility in value and could be subject to aggressive investment risk and price volatility risk. Such risks are described in the prospectus. The Global X Money Market Funds are not covered by the Canada Deposit Insurance Corporation, the Federal Deposit Insurance Corporation, or any other government deposit insurer. There can be no assurances that the money market fund will be able to maintain its net asset value per security at a constant amount or that the full amount of your investment in the Funds will be returned to you. Past performance may not be repeated. The prospectus contains important detailed information about the Global X Funds. **Please read the relevant prospectus before investing.**

Global X Total Return Index ETFs ("Global X TRI ETFs") are generally index-tracking ETFs that use an innovative investment structure known as a Total Return Swap to deliver index returns in a low-cost manner. Unlike a physical replication ETF that typically purchases the securities found in the relevant index in the same proportions as the index, most Global X TRI ETFs use a synthetic structure that never buys the securities of an index directly. Instead, the ETF receives the total return of the index by entering into a Total Return Swap agreement with one or more counterparties, typically large financial institutions, which will provide the ETF with the total return of the index in exchange for the interest earned on the cash held by the ETF. Any distributions which are paid by the index constituents are reflected automatically in the net asset value (NAV) of the ETF. As a result, the Global X TRI ETF receives the total return of the index (before fees), which is reflected in the ETF's share price, and investors are not expected to receive any taxable distributions. Certain Global X TRI ETFs (Global X Nasdaq-100 Index Corporate Class ETF and Global X US Large Cap Index Corporate Class ETF) use physical replication instead of a total return swap. The Global X Cash Maximizer Corporate Class ETF and Global X USD Cash Maximizer Corporate Class ETF use cash accounts and do not track an index but rather receive interest paid on cash deposits that can change over time.

The Global X Bitcoin Covered Call ETF (BCCC) and the Global X Enhanced Bitcoin Covered Call ETF (BCCL) are each exchange traded alternative mutual funds that invest in other alternative mutual funds that invest, directly or indirectly, in Bitcoin. There are inherent risks associated with products linked to crypto assets, including Bitcoin Futures. While Bitcoin Futures are traded on a regulated exchange and cleared by regulated central counterparties, direct or indirect exposure to the high level of risk of Bitcoin Futures will not be suitable for all types of investors. Given the speculative nature of bitcoin and the volatility of the digital currency markets, there is no assurance that BCCC or BCCL will be able to meet their respective investment objectives. An investment in BCCC or BCCL is not intended as a complete investment program and is appropriate only for investors who have a sophisticated knowledge and understanding of Bitcoin and the capacity to absorb a loss of some or all of their investment. An investment in either BCCC or BCCL is considered high risk.

CASH, HSAV, HSUV.U, and UCSH.U use cash accounts and do not track a traditional benchmark but rather receives interest paid on cash deposits that can change over time. These ETFs primarily invest in bank deposit accounts.

Certain ETFs are alternative investment funds ("Alternative ETFs") within the meaning of the National Instrument 81-102 Investment Funds ("NI 81-102") and are permitted to use strategies generally prohibited by conventional mutual funds, such as the ability to invest more than 10% of their net asset value in securities of a single issuer, the ability to borrow cash, to short sell beyond the limits prescribed for conventional mutual funds and to employ leverage of up to 300% of net asset value. While these strategies will only be used in accordance with the investment objectives and strategies of the Alternative ETFs, during certain market conditions they may accelerate the risk that an investment in ETF Shares of such Alternative ETF decreases in value. The Alternative ETFs will comply with all requirements of NI 81-102, as such requirements may be modified by exemptive relief obtained on behalf of the ETF.

The payment of distributions, if any, is not guaranteed and may fluctuate at any time. The payment of distributions should not be confused with an exchange-traded fund's ("ETF") performance, rate of return, or yield. If distributions paid by the ETF are greater than the performance of the ETF, distributions paid may include a return of capital and an investor's original investment will decrease. A return of capital is not taxable to the investor, but will generally reduce the adjusted cost base of the securities held for tax purposes. Distributions are paid as a result of capital gains realized by an ETF, and income and dividends earned by an ETF are taxable to the investor in the year they are paid. The investor's adjusted cost base will be reduced by the amount of any returns of capital. If the investor's adjusted cost base goes below zero, investors will realize capital gains equal to the amount below zero. Future distribution dates may be amended at any time. To recognize that these distributions have been allocated to investors for tax purposes the amounts of these distributions should be added to the adjusted cost base of the units held. The characterization of distributions, if any, for tax purposes, (such as dividends/other income/capital gains, etc.) will not be known for certain until after the ETF's tax year-end. Therefore, investors will be informed of the tax characterization after year-end and not with each distribution if any. For tax purposes, these amounts will be reported annually by brokers on official tax statements. **Please refer to the applicable ETF distribution policy in the prospectus for more information.**

If applicable to the ETF, the sub-advisor and manager have a direct interest in the management fees and performance fees of the Global X Funds, and may, at any given time, have a direct or indirect interest in the Global X Funds or its holdings.
